

## Math 3100 Assignment 9

### Taylor Series

*Homework due date: 1:00 pm on Friday the 12th of April 2019*

1. Find a power series representation for the function

$$(a) \ f(x) = \frac{1}{4+x^2} \qquad (b) \ g(x) = \frac{1}{(1+x)^2} \qquad (c) \ h(x) = x \log(1+x)$$

2. Evaluate these sums

$$(a) \ \sum_{n=0}^{\infty} 2^{-n} \qquad (b) \ \sum_{n=3}^{\infty} \frac{4^{1-n}}{2n-1} \qquad (c) \ \sum_{n=1}^{\infty} n^2 3^{-n}$$

3. Find the Taylor Polynomial of order  $n$  generated by  $f$  centered at  $x_0$ .

$$(a) \ f(x) = \log x, \quad x_0 = 1, \quad n = 3$$
$$(b) \ f(x) = \sqrt{x+4}, \quad x_0 = 0, \quad n = 2$$
$$(c) \ f(x) = \frac{xe^{-x}}{x^2+1}, \quad x_0 = 0, \quad n = 6$$

4. Let  $f(x) = \frac{1}{1+3x^2}$ . Without differentiating, find  $f^{(8)}(0)$ . Show your work.

5. Find the Taylor Series centered at  $x_0 = 0$  (the Maclaurin Series) of the following functions.

$$(a) \ x^2 \sin x$$
$$(b) \ \sin^2 x \quad \text{Hint: } \sin^2 x = (1 - \cos 2x)/2.$$

6. Find the Taylor series generated by  $f$  at  $x_0$ .

$$(a) \ f(x) = x^4 + x^2 + 1, \quad x_0 = -2$$
$$(b) \ f(x) = x^{-2}, \quad x_0 = 1$$

7. For what values of  $x$  do the following polynomials approximate  $\sin x$  to within 0.01

$$(a) \ P_1(x) = x \qquad (b) \ P_3(x) = x - x^3/6 \qquad (c) \ P_5(x) = x - x^3/6 + x^5/120$$

8. How accurately does  $1 + x + x^2/2$  approximate  $e^x$  for  $-1 \leq x \leq 1$ ? Can you find a polynomial that approximates  $e^x$  to within 0.01 on this interval?

9. (a) How accurately does  $1 - x^2 + x^4/2$  approximate  $e^{-x^2}$  for  $-1 \leq x \leq 1$ ?  
(b) Can you find a polynomial that approximates  $e^{-x^2}$  to within 0.01 on this interval?

10. Find a polynomial that will approximate

$$F(x) = \int_0^x t^2 e^{-t^2} dt$$

for all  $x$  in the interval  $[0, 1]$  with an error of magnitude less than  $10^{-3}$ .
